FUNCTION INDEX

Function Name	Page	Chapter	Purpose
AtomicWire	251	Eight	quantum wire eigenstates with one atom per site
BECbl	130	Four	BEC boundary layer of Gross-Pitaeskkii equation
Butterfly	298	Nine	Hofstadter's butterfly
C60	29	Two	plot the fullerene structure
CCI	85	Three	CCI model for helium like atom
CGSAT10	153	Five	coarse-graining simulated annealing based on Tersoff potential to optimize for C60 structure
Correlation Dimension	296	Nine	fractal dimension determined by correlation dimension
Crystal Electron	293	Nine	semiclassical trajectory of Bloch electron
DOS	312	Ten	graphene density of states
Energy Dispersion	311	Ten	CNT energy band
FEM1d	167	Five	1d Finite Element Method
FEMH2	175	Five	2d Finite Element Method for hydrogen molecule
FFT	138	Five	Fast Fourier Transform
Fibonacci	30	Two	Fibonacci recursive formula
Friedel Oscillation	268	Nine	plot Friedel oscillation in Thomas-Fermi Screening
Graphene Energy Band	306	Ten	graphene energy band
H2	51	Two	symbolic program for hydrogen molecule
H2Energy	52	Two	evaluate the minimum energy of H ₂
H2MO	77	Three	calculate the bond energy and the bond length for H ₂

Function Name	Page	Chapter	Purpose
H2VB	80	Three	valence bond model for H ₂
H2W	82	Three	Weinbaum model for H ₂
He	28	Two	plot energy in terms of variational parameters
He Energy	71	Three	helium energy components
He EnergyC	72	Three	helium energy components with correlation
Helical Winding	28	Two	plot helical coil rotating along the axis
Henon Map	296	Nine	fractal dimension of Henon map
Honeycomb	307	Ten	plot graphene sheet
Inverse Distance	74	Three	spherical harmonic representation of inverse distance
KP	160	Three	Kronig-Penney model
KVN	83	Three	kinetic and potential energy components and normalization constant of helium like atom
lag	70	Three	Laguerre polynomials
Landau	104	Three	solve for Landau levels — Landau gauge
Landau0	107	Three	solve for Landau levels — symmetry gauge
LeapFrog	231	Seven	leap frog routine: converted to dll binary code
LJEnergyC.c	231	Seven	leap frog routine c source code calculating
LJForceC.c	232	Seven	leap frog routine c source code calculating force
mcH2W	142	Five	Monte Carlo H ₂ molecule Weinbaum model with correlation
mc Integration	140	Five	integration by MonteCarlo
MC Distribution	141	Five	generate a Monte Carlo distribution function
	235	Seven	calculate the transport coefficients and convert to dll
mcPI	140	Five	obtain the value π to three digits of accuracy
MDH2O	320	Ten	molecular dynamics simulation of water
MDlf	161	Five	molecular dynamics study of nanocluster showing self organization; leap frog algorithm
mex Function	231	Seven	MATLAB executing dll
Mode Conversion	274	Nine	mode conversion from EM wave to ES plasmon

Function Name	Page	Chapter	Purpose
montecarlo.h	237	Seven	header file for MPIC Monte Carlo code
montecarlo.c	238	Seven	MPIC Monte Carlo source code
Nano Cluster	256	Eight	nanoparticle in jellium model with electron-electron interaction
Nano Particle	255	Eight	nanoparticle in jellium model
plotPSI	27	Two	plot Ψ_{1s} and Ψ_{2s}
plot Saddle	28	Two	plot the electrostatic potential
QD	247	Eight	quantum dot eigenstates
QTable	254	Eight	set up table of Q coefficients in Eq(8.14) when expanding in Legendre polynomial
Quantum Chaos	288	Nine	quantum trajectory under standing wave
Quantum Wire	250	Eight	quantum wire eigenstates with cylindrical potential
REF	70	Three	radial eigen functions
SAPGA	148	Five	Skeleton program for simulated annealing plus genetic algorithm; pseudo code
Simulated Annealing	147	Five	skeleton program for simulated annealing; pseudo code
Single Impurity	216	Six	single quantum dot junction
Stairs	31	Two	Fibonacci recursive solution
StandingWave	285	Nine	stochasticity of standing wave
SuperLattice	96	Three	energy band gap for superlattice
TBJ	213	Six	transport across a molecular junction in tight-binding model: matching boundary conditions
TBJM	211	Six	transport across a molecular junction in tight-binding model: Green function method
TightBinding	33	Two	eigenvalue solver for sparse tridiagonal matrix
TP	53	Two	transition probability
VanderPol	120	Four	solve the van der Pol equation
vReadTable	77	Three	read the table of V_{abab}
vTable	77	Three	set up a table for the energy component V_{abab}
WELL	49	Two	roots for potential well of constant well depth
WorkFunction	95	Three	work function for metals: gold/silver/copper

KEYWORD INDEX

- AB (Aharonov-Bohm) effect, 188
- ab initio*, 14, 159, 183, 189
- atomic force microscopy (AFM), 1, 4, 5, 6, 15
- algorithm genetic, 147–150
- amino acids, 16, 88–90
- aquaporin, 91
- asymptology, 33–57, 122, 131–132

- Berry phase, 104
- beta Function 68
- bifurcated solutions 127, 128, 133
- Bloch-Floquet theorem phase factor 40, 98, 99, 214, 250
- Bloch, 99, 196, 249, 290, 292, 298
 - frequency
 - momentum
 - wave vector
- Bohr energy, 52, 63, 70, 73, 97, 191
- Bohr radius, 34, 63, 64, 70, 73, 97, 109, 191, 195, 221, 253, 259
- Born-Oppenheimer Approximation 120, 122
- Bose-Einstein Condensate (BEC), 128–132
- boundary layer, 115, 124–132
- Brillouin zone, 304, 305, 310, 312
- broadband spectra, 147, 184
- Brownian motion, 147, 184

- canonical distribution, 61, 297
- capacitance, 218, 221–222
- Chaos quantum, 284–299
- carbon nanotube (CNT), 9, 14, 245, 303–303

- armchair
- chiral
- zigzag
- coarse graining, 152–154, 198
- coherence, 148, 149
- commutation relation, 120, 191
- composite Fermion (CF), 278, 283, 284
- configuration interaction, 73, 83–87
 - CI correlated
- confluent hypergeometric functions, 67
- cone snails, 10, 16
- Cooper pair, 277
- correlation dimension, 148, 149, 151
- Coulomb blockade, 220, 221, 222, 246, 248
- Coulomb staircase, 222

- Delaunay triangulation, 32, 137, 152, 158, 185
- density functional theory (DFT), 136, 140, 144
- density of states (DOS), 39, 101, 102, 205, 221, 223, 281, 310, 312
- diamond, 8, 9, 194–199
- Dirac cone, 306, 330
- distributed computing, 227, 234, 243
- divide-and-conquer, 31, 137, 151
- DNA, 5, 6, 88, 89, 91, 109, 329
 - adenine, thymine,
 - guanine, cytosine, 4, 5, 65

- dynamic-link library (DLL), 229–233, 234, 319
- Dyson equation, 205
- effective mass, 193, 330
- energy band conduction gap valence, 32, 34, 56, 91, 92, 95–97, 100–101, 196, 197, 213, 289, 292, 304, 306
- elliptical instability, 284–286
- Euler angles, 316, 331
- equipartition, 60
- Euler's constant, 43
- evaluation local global effective 150–157
- exchange interaction energy, 192
- Fano effect, 246
- Fast Fourier Transform (FFT), 22, 32, 137–138, 285, 289
- Fermi level, 92, 94, 248
- Fibonacci, 30, 31, 136–137
- finite difference method, 110, 133, 164, 198, 225, 251, 257, 259, 275
- finite element method (FEM), 21, 152, 158, 164–182, 198
- fractal, 290–297, 298, 301
- fullerene, 8, 15, 30, 153, 158, 164, 245, 258, 331, 332
- full-potential linearized augmented-plane-wave (FLAPW), 196–198
- gene therapy, 150, 152
- genetic algorithm, 147–150
- graphene, 157, 185, 246, 258, 300, 304–312, 330
- graphic card process unit (GPU), 242
- Green's function method, 145, 204–218, 225
- Gutzwiller projection, 95
- gyrotron, 277
- Heisenberg picture, 122, 291
- helium, 29, 70–73, 87, 110, 112, 201
- Hellmann-Feynman theorem, 258
- Hofstadter's Butterfly, 278, 297–298
- hydrogen atom, 47, 63, 65, 73–78, 79, 81, 109, 320
- hydrogen molecule, 50, 73–78, 79, 81, 86, 111, 142–145, 174, 185, 186, 187
- inductance, 218, 222–223
- in-silico*, 14
- in-vitro*, 13
- in-vivo*, 13
- insulator, 92
- ionic-covalent resonance, 81
- k-point sampling, 199
- Kondo effect, 246, 258
- Kronig- Penney model (KP model), 98, 99, 100
- Landau damping, 266–267
- Laplace method for integrals, 46, 48
- Legendre Functions Associated, 66, 74, 75, 76, 137, 254
- limit cycle 286
- Linear Combination of Atomic Orbitals (LCAO), 79, 112
- local density approximation, 129, 191–194
- lotus effect, 10
- magnetic flux quanta, 107, 279, 280, 283, 295, 301
- magnetic length, 104, 281
- matching procedure, 124, 125
- Markov process, 300

- materials optimized bio smart, 2
- message passing interface (MPI), 227, 230, 233–241
- mesoscopic physics, 59
- metal, 92, 94, 95
- microarray, 6, 7
- microscopy, 1, 4, 5, 8
 - atomic force
 - electron
 - optical
 - scanning
 - soft x-ray
 - tunneling
- molecular computer, 14, 88–89, 303, 328–300
- mode conversion, 271, 273, 274, 300
- molecular dynamics (MD), 115, 131, 159–164, 183
 - ab initio*
 - Car-Parrinello
 - tight-binding
- molecular orbital, 50, 79, 81, 194
- Monte Carlo direct simulation, 20, 102, 106, 176, 182
- multiple space scales, 124–132
- multiple timescales, 116–124
- multiphysics, 116, 132
- multiscale, 116, 131, 132

- near field optics, 5, 6, 38, 299
